

Businesses that efficiently move, convert, and share large volumes of information can significantly increase profitability and improve customer satisfaction. This is easier said than done. The systems that handle data are diverse and do not interoperate; large files, and large volumes of messages, clog network performance; and storing and securing large amounts of data causes email and other infrastructure costs to soar. No point solution available – encryption programs to secure data, file transfer technology to move large files, email for easy and convenient communication, etc. – offers a consistent and coherent solution for data exchange. DataMotion’s patented technology lets you exchange messages with any internet recipient.

DataMotion provides the industry's first technology platform specifically designed for intelligent information transport (IIT). Our IIT platform enables businesses to move, filter, track, audit, manage, and secure unstructured data, such as email communications. In the past, this data typically has been isolated and difficult or costly to integrate into other systems. However, the DataMotion cloud-enabled IIT platform makes it easy to incorporate unstructured data into your workflow so you can derive greater business value from your communications and file transfer.

You can install the IIT platform either as an on-demand service or on-premise. With the on-demand service, you can be up and running in a matter of hours. The on-demand service provides high availability and disaster recovery. The primary and backup data centers are geographically dispersed. They are SAS-70 audited, and equipped with full backup and monitoring capabilities. The IIT platform is standards-based and plugs right into your existing infrastructure.

- Recognize immediate cost reduction, improve your bottom line, and increase your business’s competitive advantage.
- Reduce your exposure to compliance policy violation, litigation and penalties.
- Make intelligent business decisions with the visibility gained from management, control, security and reporting of data exchanges.
- Extend trust by developing more secure communication between you and your customers.
- Quickly and cost-effectively reduce human error so you can focus on your business priorities.
- Meet SLA requirements

“With the volatility of the economy, companies are looking to efficiently share, secure, audit and manage the movement of information from point to point. Having a platform that automates some of these governance processes without the expense of additional hardware or expensive integration middleware -- means companies can be more transparent and confident that they are compliant with industry, regional and legal regulations and mandates.”

Gartner

BENEFITS

Extended business relationships - IIT platform incorporates military grade triple-DES encryption so you can communicate with your customers and partners securely and with confidence.

Improved Productivity - IIT platform works with XML data formats and includes a comprehensive set of Web Services APIs written in SOAP/XML. You can easily apply the DataMotion solution anywhere in your organization where automating a business process would provide value (such as importing customer data collected via a secure form into a CRM database).

Immediate cost savings recognition - Deploy the IIT platform either as an on-demand or an on-premise solution. The on-premise version enables you to keep more of your data behind your own firewall, but also deploys quickly (less than a day) and requires little up-front investment. The on-demand version provides all the benefits typical of on-demand solutions, including an even faster rollout (usually just a few hours) and zero maintenance.

Reputation protection - Increase consumer trust in your business process by ensuring that sensitive information is always sent securely.

Leverage existing infrastructure - IIT platform includes support for Windows 2000 and later; and integrates with the most popular email platforms (Exchange, Notes and GroupWise). There's no need to invest in new technology.

FEATURES

Works with Exchange, Lotus Notes and GroupWise

No additional hardware or infrastructure needed

Offered on premise or on demand

HTML and CSV Reporting

Simple to use Encryption - No PKI necessary

24 x 7 x 365 Monitoring

APIs for integration with legacy systems or business productivity systems

ADDITIONAL TECHNICAL SPECIFICATIONS:

- User Provisioning
 - DataMotion Patented Auto Provisioning
 - LDAP/Active Directory
- Web Services (API)
 - AXIS 1.1 and 1.2
 - SOAP -Lite 1.1 and 1.2
 - .NET 1.1 and 1.2
 - PHP5 1.1 and 1.2
 - gSOAP 1.1 and 1.2
 - EasySoap 1.1 and 1.2
 - NuSOAP 1.1
 - PEAR 1.1 and 1.2
- Industry Standard encryption: 3DES, SSL, TLS
- SOAP/XML, SMTP/S, POP3/S, HTTPS Standards supported
- SAS70 Level 2 DataCenter Certified
