

### SecureMail for Loan Officers

When loan applicants need to supply their supporting documentation, it can clog the application process and delay sales. Documents often contain confidential information that must be protected under privacy laws such as GLBA (Gramm–Leach–Bliley Act). Exchanging these documents via traditional means (fax, mail, courier, in-person) can be costly and inconvenient, and using regular email or file sharing is not secure or compliant.

SecureMail is an email encryption and file transfer service that provides a fast, smart and easy way for loan applicants to send secure messages and upload sensitive documents to a loan officer during the application and approval process. Using the unique ‘SecureContact.me’ feature, SecureMail can eliminate the need for overnight courier services, faxes and travel, while accelerating the loan process in a secure and compliant way.

#### How it works.....

1. Loan Officer sends email requesting documents
2. SecureContact.me signature line button links to a secure portal
3. Loan Prospect securely uploads document file(s)
4. Loan officer is notified immediately download file(s)
5. All transactions are logged for traceability
6. If needed, email dialogue continues securely

SecureMail has features and benefits for everyone involved in the loan process:

#### Features / Benefits for Loan Officers

Your customers can safely send you confidential documents anytime, anywhere
