

Email Encryption Service for use with Microsoft Office 365

DataMotion™ SecureMail for Microsoft Office 365 allows encrypted email and file attachments to be sent from Office 365 without the need to install special apps or exchange encryption keys. Organizations can use the SecureMail service with Office 365 to easily and safely exchange sensitive emails and files with customers, business partners and vendors while maintaining compliance with privacy regulations.

Features
Strong, compliance grade encryption for email content and file attachments
Leverages the Office 365 content filtering
100% compatible with on-premise or cloud-based archiving systems
Automated account provisioning for your message and file recipients
On-demand and automated reporting for all secure transactions
Includes SecureContact.me signature line link for receiving encrypted messages and files from anyone
Step-by-step setup guide for quick service startup and operation
Benefits
Makes Office 365 secure and compliant, minimizing exposure to regulatory violations
Improves service and contains costs with secure email speed and cloud computing efficiency
Reduces exposure to regulatory violations by encrypting Office 365 emails and file attachments
Increases customer loyalty and trust by protecting their sensitive information with encryption

/SolutionBrief

How It Works

The diagram below provides an illustration of how easily SecureMail is integrated with Microsoft Office 365. The content filter provided as part of Microsoft Office 365 flags the message as secure based on a pre-defined criteria, such as special characters in the subject line or a data pattern inside the message considered sensitive or confidential. Once the message is marked as secure, it is sent via TLS to DataMotion SecureMail cloud, which securely delivers the message to the recipient using a web-link where the encrypted message and files can be easily retrieved, and replies initiated. In addition, a one touch SecureMail button can be used to automate the trigger word (via simple Outlook plug-in).

Microsoft Office 365 Message Encryption and DataMotion SecureMail comparisons

Office 365 includes a message encryption capability which is suitable for many secure messaging applications. DataMotion SecureMail is purpose built to address compliance needs for regulated industries such as healthcare, finance, insurance, and enterprise as well as public sector organizations. It enhances the compliance profile and addresses key usability factors in critical workflows where regulated information is exchanged via Office 365 email services.

Feature	DataMotion SecureMail	Guidance
Policy Filters	US policy templates for key regulations such as HIPAA, GLBA and PCI-DSS, custom configs, and exact matching options	SecureMail provides refined templates and sophisticated tools designed to minimize ‘false positives’ – needless encryption overhead which can frustrate users and recipients
Delivery Options	SafeTLS option, notification email to one-step retrieval	SecureMail provides simplified delivery options for an enhanced recipient experience – secure, verified TLS delivery in the clear, or notification email with single step retrieval.
Notifications and Message Retrieval	Automatic account setup	SecureMail offers a single step process to retrieve messages and file attachments, easier for recipients
End-to-end security	Zero-Trust design protects messages; service platform can be deployed on premises in secure data centers	If maximum email security is required (such as for CJIS law enforcement applications), SecureMail is recommended.
Mobile Support	Optimized for mobile sender and recipient, one-step retrieval	SecureMail SafeTLS and notification link/portal are optimized for mobile senders and recipients; sending and receiving encrypted messages and attachments with one-step process
