DataMotion SDX Platform: Secure Data Exchange Services for Healthcare, Financial Services, Public Sector, and Insurance Powered by Microsoft Azure

MICROSOFT AZURE SOLUTION BUILDER PROFILE: DataMotion

The DataMotion SDX Platform is a hub for secure data exchange services – a unique toolkit that can be used to enable a wide range of sensitive data-in-motion workflows. Hosted on Microsoft Azure, it helps enterprises reduce the cost and complexity of secure data exchange to ensure information transfers are compliant with privacy and security regulations.

WHAT WE OFFER

SDX for Healthcare

Enabling providers and patients to communicate more efficiently goes well beyond regulatory and incentive programs – it's now a requirement. The SDX Platform services protect private, patient health information and help improve patient outcomes through more efficient, interoperable, and integrated health information exchange.

SDX for FinServ

Financial services firms are always exchanging documents, faxes, emails, and forms containing private and confidential account information. This sensitive data must be protected without impeding the business process. The SDX Platform provides seamless security and compliance for any financial data in motion.

SDX for Public Sector

Public sector agencies at the state and local levels constantly handle private data and must maintain the public's confidence in keeping sensitive data private. The SDX platform maintains public trust with secure data exchange services, such as CJIS support for Office 365 email encryption, secure file transfer, secure forms, and workflows.

SDX for Developers

Do your customers use your software or application for business processes that handle sensitive data? The SDX Platform is equipped with comprehensive secure data exchange APIs to enable exchange while protecting application data-in-motion from theft, accidental exposure, and regulatory compliance audits.

WHAT OUR CUSTOMERS ARE SAYING

"The DataMotion SDX Platform enables our income tax and utility billing divisions to interact with citizens securely. This is a much more convenient way for citizens to resolve their issues compared with traditional phone or in-person queries."
– Diana Steck, Manager, Accounts Receivable Division, City of Xenia, OH

Microsoft | Go-To-Market Services

Microsoft Azure

Microsoft Azure is an open and flexible cloud platform that enables you to quickly build, deploy, scale, and manage applications across a global network of Microsoft data centers. You can build applications using multiple languages, tools, and frameworks.

KEY USE CASES

WEB APPLICATIONS
Build anything from lightweight websites to multi-tier cloud services that scale up as your traffic grows.

CLOUD STORAGE
Rely on geo-redundant cloud storage for backup, archiving, and disaster recovery.

BIG DATA & HPC
Get actionable insights from your data by taking advantage of a fully compatible enterprise-ready Hadoop service.

MOBILE
Accelerate your mobile app development by using a backend hosted on Microsoft Azure. Scale instantly as your install base grows.

MEDIA
Create, manage, and distribute media in the cloud – everything from encoding to content protection to streaming and analytics support.

FLEXIBLE APPLICATION MODEL
Microsoft Azure provides a rich set of application services, including SDKs, caching, messaging, and identity. You can write applications in .NET, PHP, Java, node.js, Python, Ruby, or using open REST protocols. This is all part of Microsoft's promise to let you build using any language, tool, or framework.

ALWAYS ON, ALWAYS HERE
Build resilient applications with automatic operating system and service updating, built-in network load balancing, and geo-redundant storage. Microsoft Azure also proudly delivers a 99.95% monthly SLA. You can rely on decades of experience in data center operations and trust that everything Microsoft Azure offers is backed by industry certifications for security and compliance.

DATA CENTER WITHOUT BOUNDARIES
Microsoft Azure makes it easy for you to integrate your on-premises IT environment with the public cloud. Migrate your virtual machines to Microsoft Azure without the need to convert them to a different format. Use the robust messaging and networking capabilities in Microsoft Azure to deliver hybrid solutions, and then manage your hybrid applications from a single console with Microsoft System Center.

GLOBAL REACH
With data centers around the globe, a massive investment in data center innovation, and a worldwide Content Delivery Network, you can build applications that provide the best experience for users, wherever they are.
